

FUME-FIX

***Solve your
Welding and other
'nuisance' or harmful
fume problems.***

**Compact, Affordable and Efficient
FUME-FIX is the answer!**

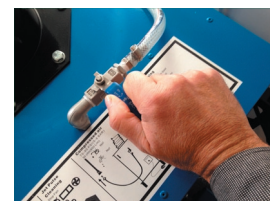

FUME-FIX is built around a high efficiency cartridge with 0.3 micron filter capability. (1/3000th of a millimetre!) Our Cartridge has a huge 20m² of filter area with purification efficiency up to 99.9%. This high efficiency and optimised design means FUME-FIX can outperform many twin filter units (despite their larger motors) So FUME-FIX reduces your electricity and filter costs.

The 1200m³ per hour airflow comes via a high efficiency fan powered by a 0.75hp induction motor which you plug in to the nearest 230v outlet for flexibility of positioning. FUME-FIX is easy to move via 2 pull handles and glides on large lockable castors. Very compact 610 x 830mm footprint.

Best of all - you clean the cartridge without opening the access door or removing it from the machine using the 'reverse pulse' system that connects to your compressed air supply. A sturdy steel 'slide-out' tray allows quick removal of any particle waste collected.

The flexi- hose collection arm rotates 360 degrees and is self supporting allowing you to position it close to the generation point for optimum fume removal. Your choice of 2m or 3m arm is included in the price!

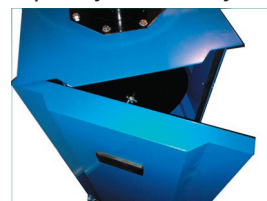

Your new FUME-FIX is very solidly built to the tough 'CE' compliance standards and you're protected by your MICRONAIR 12 month Warranty.

***Clean your filter
quickly and safely***

High efficiency Fan

***Solid build - e.g. the
'no flex' box section
welded access door***
